

The grade I deserve is an 8.0, because I did the best I had to offer, which included the following:

= A README.md file with a pretty (&) useful desktop picture (..trust me, I speak from experience) Also, I mentioned this file in there so it will be easy for you to find.

To the left you can see how I put To-Do items in my issues list individually so that I can check them off once finished and read a better description when I open them. There is also a nice Spanish message of Javier there.

As you can see above, I have a .gitignore file, but I did not check "create a licence" when creating my repository and unfortunately I couldn't find it later.

To the left I closed Javier's nice Spanish message.

Below here you'll see a commit I placed with my right username & email.

Commits on Jan 18, 2016

- initial commit
richelbilderbeek committed 4 days ago

To the right are some accepted pull requests. I did not want to deny them because they were nice :) but I do know how to.

The screenshot shows the GitHub profile of Miranka van Breugel. At the top, there's a search bar and navigation links for Pull requests, Issues, and Gist. The profile header includes a profile picture, the name 'Miranka van Breugel', and the location 'Groningen'. Below this, it shows 'Joined on Jan 22, 2016' and statistics: 10 Followers, 2 Starred, and 13 Following.

The main content area is divided into three sections:

- Popular repositories:**
 - PBfB2016_Project** (1 star): Using scripts to automatically insert data from ...
 - BioinformaticsForBiologists20...** (0 stars): GitHub for the Bioinformatics for Biologists 20...
 - ColdFusionReactor** (0 stars): My first summer project in Python
- Repositories contributed to:**
 - richelbilderbeek/Bioinformatics...** (2 stars): GitHub for the Bioinformatics for Biologists 20...
 - richelbilderbeek/ColdFusionRea...** (0 stars): My first summer project in Python
 - gatzagataraino/prueba** (0 stars): miramos a ver que tal
- Contributions:** A calendar view showing contributions from February to January. It indicates 21 total contributions in the last year (Jan 22, 2015 – Jan 22, 2016), a longest streak of 1 day (January 22 – January 22), and a current streak of 0 days (last contributed 8 hours ago).

At the bottom, there's a 'Contribution activity' section showing 14 commits over a period of 1 week.

Here's a print screen of my profile page showing my profile picture, repositories I contributed to, repositories I forked, that I starred two repositories, that I'm following 13 people, that I'm being followed by 10 people and that I made 21 contributions this year (today).

The screenshot shows the pull request interface for the repository 'richelbilderbeek / BioinformaticsForBiologists2016Course'. The 'Pull requests' tab is selected, showing a list of pull requests. The filters are set to 'is:pr is:closed'. The list shows 1 Open and 4 Closed pull requests.

The pull requests listed are:

- Games to play** (#15 opened 3 hours ago by rolsineva)
- entered text at line 15** (#12 opened 5 hours ago by tijbestelwagen)
- Remove file** (#11 opened 5 hours ago by JurjanZee)
- added some error fixes to GitHubCommands.txt** (#10 opened 5 hours ago by Miranka)

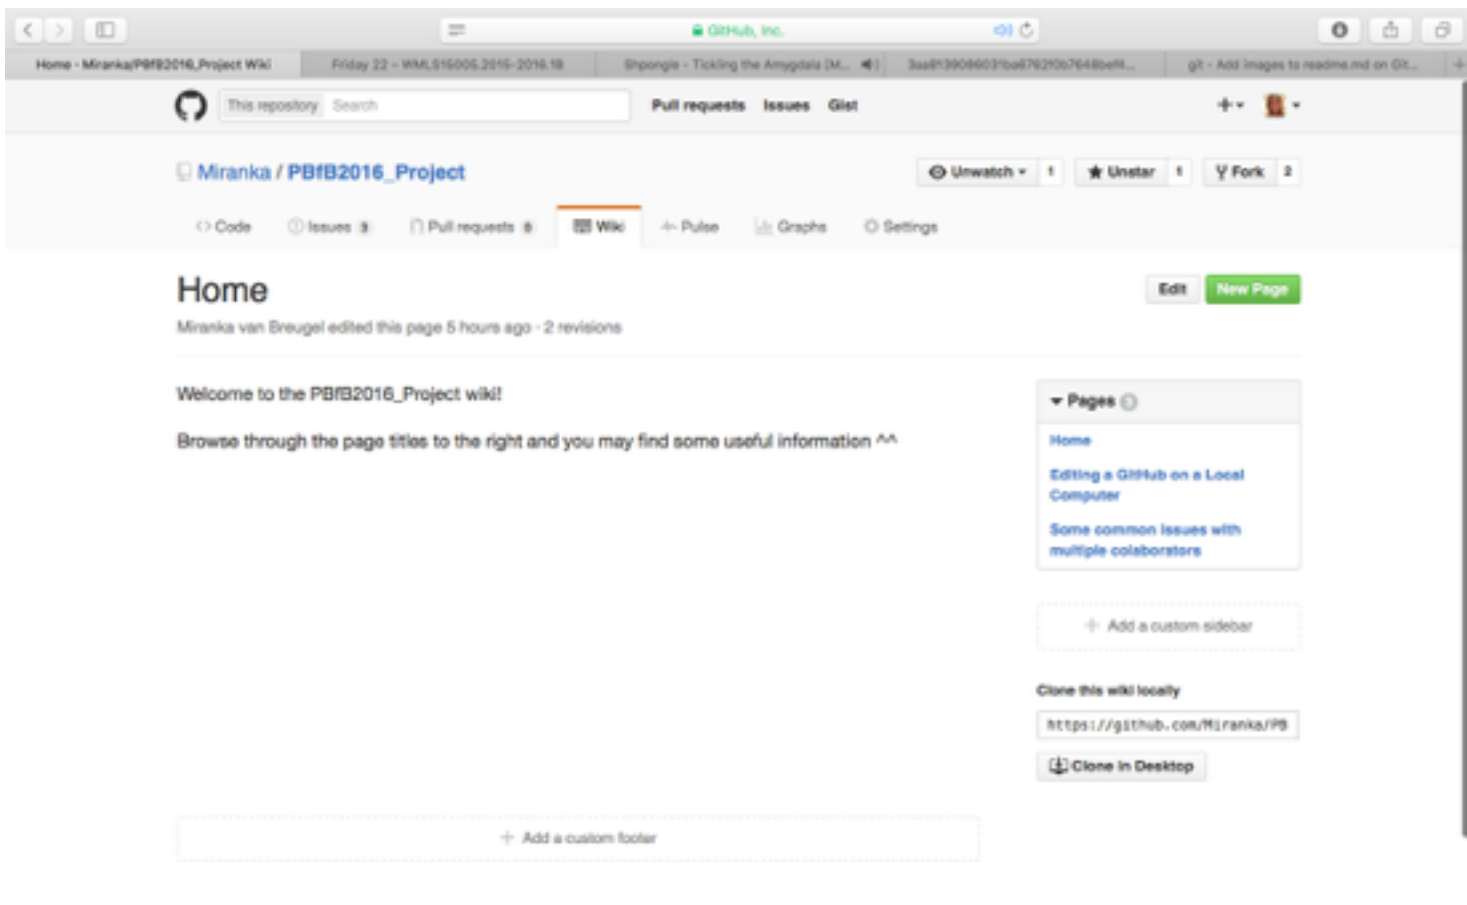

To the left are some pull requests which were accepted and merged (purple) or denied and closed (red). There's also a pull request of mine in there.

Below is a close-up of my starring projects:

The screenshot shows the 'Your stars' page on GitHub. It displays a list of repositories that the user has starred. The first repository shown is 'Miranka/PBfB2016_Project', described as 'Using scripts to automatically insert data from one spreadsheet into another', starred 6 hours ago. The second repository is 'richelbilderbeek/BioinformaticsForBiologists2016Course', described as 'GitHub for the Bioinformatics for Biologists 2016 course', starred 7 hours ago.

I also assisted some people around me that were experiencing difficulties with the use of git on their computers. Generally changing directory into the folder of the Repository did the trick, but sometimes it had to do with pulling before pushing or using `add --all` before status.

I also messed around with the wiki a bit, a function that you did not describe:

I also created an issue on the Bioinformatics repository when I was not a contributor of it yet, but then I became a contributor afterwards and I don't have a print screen.

I think this argument for my grade is about as tedious as I can make it, ticking most of the boxes of your proposed exercises. I didn't come across a merging error to fix, but I would edit it in a manner that honours both sides of the argument and push my own file.

Enjoy your weekend!

Quick Feedback:

I enjoyed your mini-course and found the regular breaks and energetic presentations very pleasant. Perhaps it would be useful to create a slide with (most) useful basic codes. Some were scattered across your presentation, but others I was unable to find. In the beginning it was not quite clear to me how to actually access git, but when I asked you quickly explained. Your explanations and answers were generally quite clear.
